

Did you know?

Medications do not work the same way for everyone. It is important to have a pharmacist review all of your medications to make sure they are working the way they are supposed to work.

Not taking your medications properly can have serious side effects. One study found that patients who did not take their blood pressure medications as prescribed were 3-7 times more likely to suffer a stroke.

Taking doses higher than those prescribed increases the risk of serious side-effects and can lead to hospitalization.

Some herbal supplements contain active ingredients. If these are taken together with prescribed medications, there is a chance for dangerous results.

Do you have more medication questions?

Tria Health provides confidential care over the phone with a pharmacist to make sure your medications are effectively improving your health.

Engaged members will be eligible to receive FREE generics and half off select brand medications.

Who Qualifies?

Plan members taking multiple medications with a chronic condition:

- Diabetes
- High Cholesterol
- High Blood Pressure
- Asthma/COPD
- Specialty Medications
- Osteoporosis
- Heart Disease
- Chronic Pain
- Mental Health
